Abstract (en)  
A roofing membrane 10 with opposed first and second sides 11, 12, where the first side has a first bonding zone 14 with an adhesive 15 for bonding the first bonding zone to a second bonding zone on the second side of a like roofing membrane 40, the adhesive being covered by a release sheet 16 that can be removed to expose the adhesive. The release sheet has a plurality of marks 21 each indicating a position for receiving a fastening means to perforate both the roofing membrane 10 and the release sheet 16 to thereby secure the roofing membrane to a building structure 30, the release sheet having a tear line 20 around each mark that allows, when the roofing membrane is secured to the building structure, removal of the release sheet outside the tear lines.
