Abstract (en)  
[origin: EP2453096A2] The sliding frame device (100) comprises a primary frame profile (101) and a secondary frame profile (102), which are connected by an insulating web (103). The insulating web comprises a fastening element (105) for fastening a third profile, which is formed as a holding profile (150) made of aluminum. The holding profile interacts with a holding element (152), such that the holding profile and the holding element support a wing (110), particularly a window or door wing.
