Abstract (en)

[origin: WO2011006989A1] The invention relates to a device capable of automatically detecting game actions that take place in the vicinity of a goal for sports or activities in which the objective is to make a projectile enter said goal. The inventive device is suitable for triggering, always in an automatic manner and in real time, audio or visual animations suited to the game situation thus detected. The invention also relates to a method for processing information suitable for qualifying a game action according to information gathered from various types of sensors placed in the playing area.
