Abstract (en)
[origin: WO2011006601A1] The invention relates to a storage facility (1, 1'), particularly a commission warehouse, having storage places (5, 5', 8, 8', 11, 11', 15, 15') for storage product carriers (23, 23') receiving inventory goods (35), comprising a quick-access storage area (2), which includes at least one conveying zone (7), at least one side of which is delimited by quick-access storage places (5, 5'), and in which a first automatic conveying device (6) having an average quick-access time (TS) to the quick-access storage places (5, 5') is movably arranged, and comprising a slow-access storage place (3) comprising at least one second conveying zone (10), which at least on one side is delimited by slow-access storage places (8, 8'), and in which a second automatic conveying device (9) having an average slow-access time (TL) to the slow-access storage places (8, 8') is movably arranged. The invention further relates to a method for the warehouse management of a warehouse (1, 1'), particularly a commission warehouse. In order to allow inventory goods (35) to be available faster, the invention provides that at least one hybrid storage place (15, 15') is both a quick-access storage place (5, 5') and a slow-access storage place (8, 8'), and that the average slow-access time (TL) is greater than the average quick-access time (TS).
