Abstract (en)

[origin: WO2011006829A1] The invention relates to a method for producing an optically transparent glass pane, comprising an electrically conductive layer and an anti-reflection layer, wherein a. an optically transparent, electrically conductive layer (3) is applied to at least a portion of the surface of the glass substrate (2) and b. an anti-reflection layer (1) is generated on the non-coated surface of the glass substrate (2), in that a solution of an acid and/or base is applied to the surface of the glass substrate (2).
