Abstract (en)
[origin: WO2011006176A1] The invention relates to a device (1) for producing a fibrous web (3), comprising an impact drying system (5) with a first elongated impact drying unit (7) and a second elongated impact drying unit (9) lying adjacent to the first unit. The longitudinal axes (L) of the first and second impact drying units (7; 9) run at an angle of inclination of 35°-55°, preferably 40°-50° and especially preferably approximately 45° in relation to a horizontal plane (HE) and the respective longitudinal directions (L) of the first and second impact drying units (7; 9) run vertically and horizontally in opposite directions starting from their respective front sections (31; 33), or the respective longitudinal directions (L) run vertically in opposite directions starting from their respective front sections (31; 33) and horizontally in the same direction.
