Abstract (en)
[origin: US2010042437A1] Devices, systems, and methods are described for remotely managing items that are configured to be stored in at least one dispensing device. This includes receiving user identification information at a host computer system from an electronic device that is remotely located from the dispensing device. This also includes transmitting from the host computer system to the electronic device a disposition of at least one item, wherein the at least one item is associated with a patient. Further, this includes receiving, at the host computer system from the remote electronic device, information about the item originating from the dispensing device, wherein the information includes a further disposition of the item.
