Abstract (en)  
[origin: WO2011006957A2] The invention relates to an integral transparent plate (1) which includes, on at least one of the surfaces (3) thereof, at least one region textured by a plurality of geometrical patterns (5) raised relative to a general plane (p) of the surface (3), each pattern having a cross-section, parallel to the general plane (p), which decreases over distance from the surface (3), from a base to a top of the pattern. According to the invention, the area (S8) of the zones (8) of the textured region for which the angle of inclination (a8) of the zone relative to the general plane (p) is less than 30° is less than 35% of the total area (Si) of the textured region.
