Abstract (en)
[origin: EP2455051A2] The support has complementary parts (2A, 2B), where each part is defined by a rectilinear outer longitudinal edge (1A) and a junction edge (1B) delimited by a broken line defining teeth (4) and notches arranged such that teeth of one of the parts are positioned at notches of another part for overlapping the parts. The teeth of the part are formed with a unitary piece and overlapped. Each tooth rests on an upper face of the latter part such that the teeth are visible on a support face and a line defined by side contacts of the teeth, form axis to allow rotation of the parts in half space.
