Abstract (en)

The invention concerns a modular post for supporting flat metal panels (1) made with electrically-welded horizontal (1a) and vertical (1b) metal wires fixed to posts (2) which in their turn are fixed to the ground at one of their ends. The post in question has a part (2a) of its lateral surface which is detached from the fixed part (2b) of the post and which in use is reconnected, using removable connection means (6a, 6b, 7), to the fixed part so as to reconstitute the post; part (2a) of the post has a section of predetermined angular width, has a height not less than the height of the panel to be connected to the post, and extends starting from the upper side of the base (3) of the post; in use, between the facing edges of parts (2a) and (2b) of the post connected to each other, longitudinal gaps (2c) are created with a width roughly equal to the thickness of the horizontal wires of the panels connected to the post. [Fig. 1]
