Abstract (en)

[origin: EP2455658A1] The device has a heat exchanger transferring heat of a heat-supplying medium to a working medium that differs from the heat-supplying medium. A supply unit (9) provides flow of the heat-supplying medium at a temperature from a heat source to the heat exchanger, and another supply unit delivers the heat-supplying medium after the supply unit passes through the heat exchanger and/or a medium at another temperature lower than the former temperature, to the flow of the heat-supplying medium at the former temperature. An independent claim is also included for a method for vaporizing a working fluid in a thermal power plant.
