Abstract (en)

[origin: EP2455669A2] The device (8) has a separate control element releasably positionable in a trough-shaped holder (13) by magnetic force and freely movable in the holder for adjusting operating conditions of a domestic appliance relative to the holder. A light-emitting region (16) is formed in a region of a surface (14) of the holder, so that light is coupled to a light entry region through the light-emitting region, where the light entry region is formed on a lower side of the control element. A light conductor is arranged at the light entry region. An independent claim is also included for a domestic appliance for preparing food products.
