Abstract (en)  
[origin: EP2455820A2] The driving mechanism (1) has main spring unit with first spring (8) and second spring (11) made of fiber-reinforced polymer. The inner extremity (10) and outer extremity (13) of first and second springs are respectively coupled to center (16) and periphery (15) of plate (14) so that two springs simultaneously wind up around axis when driving mechanism is wound up. The outer extremity (9) and inner extremity (12) of first and second springs are respectively fastened to outer drum (6) of barrel and coupled to arbor (3).
