Abstract (en)
[origin: WO2011009776A1] A water-bearing household appliance (1), which is used especially as a laundry treatment appliance for washing and/or drying laundry, comprises a housing (2) and at least one shell (7) that can be inserted into the housing (2). The shell (7) includes a shell body (8) and a shell cover (10) which covers the shell body (8). Furthermore, the shell body (8) accommodates a pump element (21) and a level sensor (22). The shell cover (10) has an electrical conductor (17) which is formed by a printed circuit board (28). The electrical conductor (17) can be connected to the pump element (21) and the level sensor (22), said connection being disconnectable. The electrical connection between the electrical conductor (17) and the pump element (21) can be formed by spring elements (30, 30'), for example, while the connection between the level sensor (22) and the electrical conductor (17) is designed as a locking connection (29).
