Abstract (en)

[origin: WO2011011679A1] A method and an apparatus for enclosing material in a bag is described for a bag comprising a stretchable material and having a first dimension and a second dimension. The method comprises stretching the bag in the first dimension, placing material in the bag, releasing the bag in the first dimension, stretching the bag in a second dimension, evacuating the bag, and sealing the bag. The apparatus comprises a bagger configured to stretch the bag in a first dimension, to receive the material, and to release the bag in the first dimension, and a packaging apparatus comprising a nozzle coupled to a vacuum system, a grasping means, and a clipper means, the grasping means configured to hold a neck of the bag to the nozzle and to stretch the bag in the second dimension.
