Abstract (en)

[origin: WO2011010073A1] The invention relates to a collection truck (1) for emptying waste collection receptacles (20), said truck including a collection tray (2) and mechanical emptying means (3, 4, 5, 8, 9, 10) for taking a receptacle (20) to be emptied and putting it through a complete emptying movement from the moment that said receptacle (20) is raised from the ground until the moment when it is placed back on the ground, and including the moment when the receptacle (20) is turned over in order to be emptied into the tray (2), said truck (1) being characterized in that it includes at least one parameterizable member among the mechanical emptying means (3, 4, 5, 8, 9, 10), said member being capable of following at least two modes of operation that are distinguishable by at least one parameter that predetermines the kinematics and/or the dynamics of the mechanical emptying means during the movement of completely lifting a receptacle (20).
