Abstract (en)

[origin: WO2011009441A2] Disclosed is a composite material, in particular a homogeneous composite material designed as a molded article and/or suitable for the production of molded articles. Said composite material is made of polymer materials and lignite and/or leonardite and/or xylite and mineral components obtained from igneous rock and/or phyllosilicate, expands under the effect of liquids, especially water, aqueous solutions, and aqueous oil emulsions, and is suitable to store said liquids, form hydrogel, and discharge said hydrogel.
