Abstract (en)

[origin: WO2011010019A1] The invention relates to a system for attaching stretched false walls consisting of a flexible sheet that is connected by the edges thereof to a stringer (3) including at least two advantageously parallel flanges (5, 7), one so-called outer flange (5) of which has a shoulder (8) and the other so-called inner flange (7) of which is connected to the first flange (5) by means of a web (6), said edges having a harpoon that is inserted between the two flanges of the stringer (3) and consisting of an inner arm, connecting the harpoon to the sheet, and an outer arm, the end bead of which bears on the shoulder (8) and comprises a disconnection lip extending into the gap between said shoulder (8) and the inner flange (7) of the stringer (3), characterized in that the stringer (3) comprises a hipped gable (3) on the end of the outer vertical flange (5) that provides an inlet bevel so as to enable the insertion of a removal tool.
