Abstract (en)

[origin: WO2011039439A1] The invention relates to a method for producing a structure from prefabricated panels (1) to be connected mounted on a free-standing supporting framework, each of the panels being made beforehand from a wood framework (2) into which an inner insulation (3) and inner (4) and outer (5) facings are capable of being built, said panels (1) being connected together by a linking means in a vertical direction and in a horizontal direction, wherein said method is characterized in that a subassembly (6) is made from a quadrangular wood frame (7), inside of which vertical posts (12) are arranged on which mechanical connectors (13) are placed, enabling the arrangement, support, and prepositioning of a metal reinforcement (14) on the connectors (13) that are in place. The thus-produced subassembly (6) is placed in a mold (not shown) so as to be overmolded from concrete constituting the inner facing (4).
