Abstract (en)
[origin: WO2011009788A1] The present invention relates to a refrigerator (1), comprising: a refrigerator body (2) having storage compartments (3); a door (4) for selectively opening or closing the storage compartments (3), wherein the door (4) comprises a continuous opening (5) penetrating the door (4) in one direction from front to back; a cover element (6) connected to the door (4) and covering at least one part of the continuous opening (5) on a rear side of the door (4); and a storage container (9) connected to the rear side of the door (4). According to the present invention, the storage compartments (9) and the cover element (6) are disposed with no intermediate space in a longitudinal direction.
