Abstract (en)

[origin: WO2011009782A1] The invention relates to a holding device (2) for bottles, particularly for arranging on a compartment floor (1) of a refrigeration device, comprising a bottle placement area (3) for receiving at least one bottle in a lying position and also comprising a mounting (4), particularly for mounting on the compartment floor (1). According to the invention, the holding device (2) has a folding mechanism by means of which the bottle placement area (3) can be converted from a space-saving folded unused position to a folded-out working position and vice versa. The invention further relates to a compartment floor (1) for arranging in a refrigeration device and a refrigeration device, both of which have at least one such holding device (2).
