Abstract (en)

[origin: WO2011010031A1] The invention relates to a method for two-line telephone calling from a first communicating object (100) to at least one second communicating object (200), including the steps of: attributing a first calling number to the first communicating object (100) and a first calling number to the second communicating object (200); activating a first calling signal on a first communication line (L 100 out); and turning on a microphone (105) of the first communicating object (100). According to the invention, the method also includes a step consisting in: automatically connecting, upon receipt of the first calling signal, a speaker of the second communicating object (200) to the first communication line (L 100 out, L 200 in) without responding to said first communication line. In addition, the method includes a step consisting in: automatically activating, from the second communicating object (200), a second calling signal to another communicating object (100, 300) on a second communication line (L 200 out); and automatically connecting a speaker of said other communicating object (100, 300) to the second communication line (L 200 out, L 100 in, L 300 in) without opening the said second communication line.
