Abstract (en)

[origin: EP2457469A1] The device has a pallet (2) comprising an upper face extending in a plane, and defining a mattress installation surface with the pallets. The pallet is movable in translation on a fixation base (5) perpendicular to the plane against action of an elastic return unit i.e. spring (19), and in rotation around two distinct axes parallel to the plane. A ball and socket joint type connector allows rotation around the axes located in the plane. The ball and socket joint type connector comprises a hemispherical external face of a casing (8).
