Abstract (en)

[origin: EP2457671A2] The table has cylindrical rotative sorting rollers or gauges (1) supported by end support (3) and another end support. Elastic elements (10) are interposed between the supports, and an actuating unit allows connection or spacing of the supports and the rollers against an antagonist action exerted by the elements, so as to decrease or increase section of passage openings (7) of sorted or calibrated products. Opposing movements of the supports and the rollers are assured by expansion or compression action of the elements. A lateral slide (11) forms a rotational driving unit of the rollers. Independent claims are also included for the following: (1) a harvesting machine of berries e.g. grape harvester, comprising a sorting table (2) a method for modifying and adjusting spacing of sorting rollers of sorting table.
