Abstract (en)

[origin: EP2457702A2] The classification system has a base, on which the contours of the classified tools and machine sections are reproduced. The Radio frequency identification-chips (7,8) are assigned to the contours, on which an identification of the respective tool or machine section is stored. A reader is designed for reading and transferring the identification from the radio frequency identification-chips of the contours to the computer system. An independent claim is also included for a method for ordering tools and machine sections with the aid of a classification system.
