Abstract (en)
[origin: EP2457841A1] Container with foldable load platform intended for transporting different pieces, so that once the container assembly is empty; it can be folded occupying a reduced space. It is characterized in that it comprises a foldable load container having two opposite side walls with the addition of a central folding line (5) and two side folding lines (6) parallel and separated by a distance from the corner joints(7) of adjacent side walls. Therefore some characteristic inner spaces are created in the folded position of the load container, which allow housing different fastening elements therein, unlike conventionally occurs wherein housing these fastening elements within the inside fold of load container is not possible.
