Abstract (en)
[origin: EP2458103A1] The system has solid wood strips placed parallel to carriers counter laths whose ends (16, 36') cooperate with base of carriers (7) for assuring fixing of openwork panels to the carriers. Each counter lath includes a notch at each end, where the notch defines a bearing surface (20) on the base of carrier. Each counter lath includes a step with respect to a length of the counter lath at an end under the notch and an extension (30) beyond the length of the counter lath at another end, where the extension extends under the notch and carries a masking strip (13) of the carrier.
