Abstract (en)  
[origin: EP2458120A2] The lock has a housing (12) and a locking element (7) pivoting around a pivot axis (10), where the locking element is arranged parallel to a drive rod. The housing is driven by the longitudinally displaced drive rod. The locking element has a support surface (8), with which the locking element closes fully with the housing in the open position and passes the upper surfaces (16,17) of the locking element and the housing continuously into each other.
