Abstract (en)  
Automatic heat boosting system, developed for a cooking device comprising at least one cooking compartment; at least two heating elements (5a, 5b, 5c, 5d) that heat this cooking compartment; at least one temperature sensor (3) that senses the cooking compartment temperature; at least one switching element (6) that has more than one position and controls the operation of said heating elements (5a, 5b, 5c, 5d) depending on the position selected from said positions; comprises a control unit (1) which is connected to said temperature sensor (3), to said heating elements (5a, 5b, 5c, 5d) and to said switching element (6), and which powers all of the heating elements (5a, 5b, 5c, 5d) independently from the position of the switching element (6) when at least one of the heating elements (5a, 5b, 5c, 5d) is started by changing the position of the switching element (6).
