Abstract (en)

[origin: EP2458752A2] The device (1) has input channels (2a-2c) for receiving audio/video signals, and an audio/video bus (3) for outputting mixed audio/video signals. The level of audio/video signals and other settings are manually adjusted by the adjusting units (4a-4d) and an electronic circuit (5), in response to input received by user. The adjusting units are provided with a guide (41a) and detection units (42a) for detecting the position of a human finger along the guide, such that the level of audio/video signals is changed according to the detected position of finger.
