Abstract (en)
[origin: WO2011012652A1] It is disclosed a machine (1) for vacuum skin packaging a product arranged on a support (7). The support has a sidewall with at least one hole (70). The machine comprises a first film transfer plate (51a) configured for holding a film sheet (61), heating the film sheet, bringing the film sheet to a position above the support with the product arranged thereon and air tightly fixing the film sheet to the support. The machine also comprises a vacuum arrangement (9) for removing air from within the support underneath the film sheet through the at least one hole. The first film transfer plate is configured to release the film sheet thereby allowing the film sheet to be drawn into the support while the vacuum arrangement is removing air from within the support.
