Abstract (en)

[origin: WO2011012504A1] The invention relates to a roller mount (100), particularly for elevator systems, having a roller (1) supported in at least two side plates (4a, 4b), wherein the side plates (4a, 4b) can be connected to a support structure (11), and wherein the side plates (4a, 4b) can be connected to a U-profile (5) by means of bolted connections (6a-6h) and at least one transverse bolt (7), so that a contact surface (18) on the bottom side of the U of the U-profile (5) supports the support structure (11).
