Abstract (en)

[origin: WO2011012524A1] A household appliance (1) that may be designed in particular as a household appliance using water comprises a housing portion (2) into which a tray (6) comprising at least one chamber arranged to receive a laundry treatment agent for a plurality of program runs can be introduced. On the housing portion (2), illumination means (15) are mounted. The tray (6) has a screen (8) on which a light aperture (20) is provided. The light aperture (20) on the screen (8) is associated with a light aperture (17) on the tray (6). The light aperture (18) of the illumination means (15) is disposed on the housing portion (2) in such a way that the light aperture (18) of the illumination means (15) is associated with the light aperture (17) of the tray (6) once the tray has at least substantially been introduced, in particular pushed into the housing portion (2).
