Abstract (en)

[origin: WO2011012467A1] The invention relates to an automatically controlled washing machine having a flushing device 8 for laundry treatment agent disposed in the front side of the machine chamber. Said device comprises a drawer 9 accessible from the front and having at least one container 16 to 18 for liquid or gel laundry treatment agent and a handle 10 fixed to the drawer 9 for pulling open and pushing in the drawer 9. In order to simplify the monitoring of the emptying of reservoirs 16 to 18 for the user, such that the user does not need to pull out the drawer 9 of the washing agent flushing device 8 in order to read a deficiency in the container contents, the container 16 to 18 comprises an at least transparent wall 29 behind the handle 10. The handle 10 also has a window-like recess 22 to 24 extending vertically in front of each container 16 to 18 in the drawer 9.
