Abstract (en)  
[origin: CA2769397A1] The invention relates to a lighting device (1,50,60,70,100,100b) having at least one body (4), particularly a heat sink, having an outer contact surface (24), and a light source carrier (6), particularly an LED carrier pressed onto the contact surface by means of at least one pressing element (43,51,61,71,101,220), the pressing element being latched on the lighting device. The invention further relates to a method for assembling a lighting device having at least the following steps: elastically bending the pressing element so that the lateral extension thereof is reduced; positioning the peripheral edge region adjacent to the at least one latching seat; and releasing the pressing element so that the peripheral edge region enters the at least one latching seat.
