Abstract (en)
[origin: WO2011012797A2] An electronic entity is adapted for a mobile terminal (60) comprising a subscriber identity card (14). The electronic entity comprises a near-field communication component (12), an antenna (13) for the near-field communication component and a wire interface (31) intended to link the near-field communication component to the subscriber identity card, the near-field communication component being positioned at the level of the antenna.
