Abstract (en)

[origin: US2011030039A1] The described apparatus and methods may include a security agent configured to transmit a first service request message via a trusted network, and acquire credential information via the trusted network. The security agent is further configured to transmit a second service request message via an untrusted network, wherein the second service request message comprising the credential information. The security agent is further configured to receive service via the untrusted network based on the credential information in the second service request message.
