Abstract (en)

[origin: WO2006122852A1] The invention relates to a method of conditioning the surface of a work piece, particularly of a strip or sheet, more particularly of a lithostrip or lithosheet, consisting of an aluminium alloy. The object of the present invention to provide a method for conditioning the surface of a work piece and a work piece consisting of an aluminium alloy enabling an increasing manufacturing speed in electro-chemically graining and maintaining at the same time a high quality of the grained surface, is solved by a conditioning method which comprises at least the two steps degreasing the surface of the work piece with a degreasing medium and subsequently cleaning the surface of the work piece by pickling.
