Abstract (en)
[origin: EP2460968A2] The side part has a metal sheet mold part (1) including a notch at an end in a transition region between an angular frame (2) and a running rail carrier (9), where the end is associated to a foot element. The foot element includes foot element sections connected by a weakening line. One of the foot element sections is fastened at the angular frame. The other foot element section is detachably connected with the running rail carrier and separable from the former foot element section along the weakening line.
