Abstract (en)

The invention relation to a sectional door panel (2) comprising window assembly (3) and at least one panel section (4), said window assembly comprises at least one glazing pane (11,12,13) attached to a window frame (14) via a first means for attaching (23), the at least one glazing pane (11,12,13) is further attached to the at least one panel section (4) via a second means for attaching (24), which is arranged to conform to dimensional changes in the sectional door panel (2). In this way the present invention is arranged for preventing that the at least one glazing pane fractures over time, e.g. due to thermal and mechanical expansion and contraction from temperatures and wind pressures.
