Abstract (en)
[origin: EP2461113A2] A receiver (5) is provided in an air conditioner body and receives a light signal emitted from a remote controller. A light receiving filter (2) is inserted in an opening provided in a front panel of the air conditioner body, protects the receiver (5), and is formed in a plate shape including a filter material that selectively transmits the light signal from the remote controller at high transmittance. A roughened section (12) having an uneven pattern is formed on a surface on the receiver (5) side of the light receiving filter (2).
