Abstract (en)

[origin: WO2011015594A1] The invention relates to a method for determining a partial group of a group of pages in a page flow, starting from a group beginning of the group, comprising determining the partial group end of the partial group, on the basis of a page status parameter. The partial group is determined by the group beginning and the partial group end, and comprises a variable number of pages. The page status parameter determines which page in the page flow is a group end of the group of pages.
