Abstract (en)

[origin: WO2011015741A1] The invention relates to a device comprising a yoke (1) to be rigidly connected to the door (2), a handle (3) mounted on the yoke and designed to control an opening member of a door lock, and removable guide means (4) mounted on the yoke and designed to guide an element for attaching the handle onto the yoke. Said device is characterized in that the guide means are provided with extraction means enabling the guide means to be extracted once the attachment element is in position on the yoke. Said device can be used for mounting outer handles, in particular in the automobile industry.
