Abstract (en)

[origin: WO2011015455A1] The invention relates to a device and a method for monitoring a device for switching a starter (170), particularly for a starter of an internal combustion engine. The function of at least one output stage (110, 120) for controlling the current flow through a switch device (190) is monitored. The output stage (110, 120) is checked for proper functioning before switching off the internal combustion engine.
