Abstract (en)

The present invention relates to a method for processing a plate (1) having a front brushed, glazed or mirror surface (1 a) and a rear surface (1 b), the method comprising an incision operation at pre-selected zones (2) of the rear surface (1b), involving a simultaneous localized heating of the zones (2), so as to cause a respective controlled permanent alteration of the front brushed, glazed or mirror surface (1a) at the incised zones (2), so as to produce a desired optical effect on such surface.
