Abstract (en)

[origin: EP2463195A1] The submarine has an inline-thruster (10) formed as a drive device and movable from a storage position in an intermediate space between a pressure body (2) of the submarine and a shell plate (4) into a linear end position outside of the shell plate. The inline-thruster is rotatable by a rotary drive in a plane normal to its linear moving direction in the end position, and a linear drive is arranged outside of the body and movably coupled with the rotary drive. The inline-thruster is rotatable by the rotary drive in an angle in a range of 360 degree around an axis in a driving direction.
