Abstract (en)

[origin: EP2463227A1] The tank (10) has a gas cap (32) connected with upper edge of a side wall (17) and limiting a hydraulic medium receiving chamber with a base part (16) and the side wall. A hydraulic medium-suction pipe (34) and a hydraulic medium-return pipe (38) extend from a hydraulic medium-suction connection (36) and a hydraulic medium-return line connection (40) of the gas cap to a bottom portion of the receiving chamber, respectively. The suction and return pipes form a tank upper part (30) with the gas cap. The tank upper part is joined with a tank base part (14). An independent claim is also included for a method for manufacturing a hydraulic tank.
