Abstract (en)  
[origin: EP2463417A1] The unit has a driven godet (30), an idler roller (17) or a godet for guiding threads (20) with a looping. A turbulence device (21) is provided for air turbulence of threads. The turbulence device is attached directly to the driven godet and forms a combining aggregate (1) with the driven godet. The combination aggregate has a rotary driven guide cladding (2) with guide sections (4.1, 4.2) axially lying in series. A circumferential guide groove (7) is formed at one of the guide sections of the guide cladding.
