Abstract (en)
[origin: EP2463439A2] The kerbstone (200) has a continuous channel (202) formed in a part of a kerbstone for accommodating an electric cable, where the part of the kerbstone is arranged at ground level. The complete channel runs through the kerbstone, and avoids constriction along passage direction. The channel comprises a plug-in sleeve at one end, a compatible enlargement at another end and a side branch (204) at the ends, where the side branch is closed. A mounting platform (203) for an electric-tank station is arranged at the side branch. An independent claim is also included for a method for producing a floor covering.
