Abstract (en)

[origin: EP2463467A2] The device has a fixed frame (3) immovably attached with a base plate (4). A guide pin is arranged at bottom of a slide piece (6). The slide piece comprises a planar recess for intervention of a locking pin (7) at a driving bar (9) of a central closure. A longitudinal guide (5b) is provided for a passage of the locking pin. The longitudinal guide has guide bars bending at ends of the bars for engaging perpendicular to an extension of the device, where the device extends sliding guides of the base plate as an outer guide.
